Project

- Full-stack Laravel website
  Jan-2022 -Present
  (https://github.com/RabinChaudhary/RabinChaudhary/tree/main/Project-Canberra)

  Created full-stack web site using blade template, JavaScript, Bootstrap on the front-side while PHP, Laravel, MySQL on the backend. I have also used GIT and GitHub for version control of the project.
  The project is website for one of the consulting companies where there is a feature of admin panel who has a privilege to register User, activate the user status, content management system for blog post, crud operation for blog post. It also features landing page, profile page, crud operation for profile page.

- Library Management System
  Aug 2021 - Nov 2021
  Associated with Victorian Institute of Technology (VIT)Associated with Victorian Institute of Technology (VIT)

  This project is about the Library Management System where its functionality was to make book reservations, search for the book in the windows app, most the privileged Librarians can find this project fruitful. To develop this windows application, I have used asp.net framework, C#, MySQL, Git, Jira.
